

Noblelift manual pallet trucks — technical parameters

Manual pallet truck

The truck is fitted with tandem fork wheels with a durable polyurethane surface and practical entry rollers that make it easier to cross pallet edges and uneven surfaces. The steer wheels have a robust steel hub with a polyurethane surface instead of a standard plastic design, for higher strength and longer life. The robust metal handle has an ergonomic plastic grip for a comfortable, secure hold during everyday handling.

Key features

- Simple operation

Intuitive controls with no training required — suited to everyday use

- Low costs

No battery or charging — minimal running costs and easy maintenance

- Hydraulic lift

Reliable hydraulics for fast and safe pallet lifting

- Robust build

Durable design for intensive daily warehouse handling
